What?

Sodium Hypochlorite NaOCL 10% (Chlorine) for sanitation and disinfection, controlling unwanted transfer of bio-organisms.

Where?

Controlling ballast water bacteria and micro organisms. Remove stains and odour in holds, any other area. Any application that require Sodium Hypochlorite (Chlorine) solution. In waste water treatment as described in procedure.

How?

Use as described in ships ballast water management plan and IMO regulations for ballast water.

For hold stain cleaning apply by brush, spray or soak. Let soak for 10-20 min without drying, flush with fresh water. For cleaning and sanitation use neat or diluted as appropriate. Ensure adequate ventilation and flushing after use, apply correct PPE

Why?

- IMO, MARPOL, USCG compliance
- Responsible environmental care
- Ensure sanitation
- Clean fouled equipment
